

Merge.It Pro® – Just Released. Add true document merging to your existing FileMaker® Pro 9, 10, 11 software solution without XML or XSLT.

Create MS Word, Apple Pages, Corel WordPerfect, OpenOffice documents with data from your FileMaker® Pro solution. Empower any program, and its users with the powerful and easy to use document merging.

Los Angeles, CA (ITPC) May 10, 2010 – IT Professional Consultants and Troi Automatisering have just released Merge.It Pro®. Merge.It Pro® is a FileMaker® Pro application that can be supplemented to any FileMaker® Pro 9, 10, 11 software solution in minutes. Enhanced with world-renowned plug-ins from Troi Automatisering give any solution the ability of creating word processing documents with data from a FileMaker® Pro solution; without the use of XML or XSLT.

Merge.It Pro® works by creating a library of merge codes based on selected fields in the FileMaker® Pro solution, input from a pop-up Dialog, static text, and even FileMaker® Pro system functions. The merge codes are then used in a word processing program to create a document template. Create as many instances of a document template with data from the FileMaker® Pro solution.

Create batches of documents to 1 or more records with a single FileMaker® Pro script. Systematically save the newly created merged document to a record specific directory on the computer. Assign the name of the newly processed document a record specific value. Use special dialogs to prompt users for the result of a merge code at the time of processing.

Special syntax and script parameters allows any FileMaker® Pro software developer to customize and leverage the power and behavior of Merge.It Pro®. Clear and easy to follow instructions accompanied with a powerful demo file help to become quickly acquainted with this powerful application.

For additional information about Merge.It Pro® or for a personal demonstration of the product and it's capabilities, contact us or visit www.itprofessionalconsultants.net. Merge.It Pro® for use on a single computer is available today in a "Lite" and "PowerUser" version.
